

Men's Irish Tournament Waterski Records and Record Holders

As the sport has developed so have skis, binders, ropes, boats, ramp surfaces etc. To keep abreast of these developments and the increase in skiers' skills, there have over the years been a number of rule and technical changes. (This should be borne in mind when comparing early records with later ones.)

Hand timing, requiring someone to hang over the side of the boat with a stopwatch, timing boat buoys as they pass them, is gladly no more. The advancement in smart boat technology has been a major development. The boat's 'brain' linked with GPS navigation now controls the speed of the boat and re-acts to the pull of the skier and ensures that boat speeds are accurately achieved and maintained.

Slalom - Originally a clear pass scored 8 points (6 buoys & 2 gates); junior men's start speed 22mph (38kph), senior 26mph (43kph); boat speeds increased by 2mph up to 38mph; rope length was the full length of 75ft (23mts); (The men's world record in 1963 had not exceeded the 38mph pass, so no rope shortenings yet.) Over the years, as the sport progressed and skiers standards increased, technical changes were made:- a full pass scored 6 points; the starting rope length was shortened from 23m to 18.25m; rope shortenings were introduced; start and base speeds were changed; boat speeds increased from 2mph to 3kph; boat speed was restricted to 58kph (36mph); pre-gate 55m buoys were introduced.

Tricks - 'Ride-out bonuses', 'Form bonuses' and 'Ski overhead bonuses' could all be originally awarded and added to the trick points. Over the years the points value of some tricks have changed and additional tricks have been added i.e. 1968/69 rule changes awarded 250 points for a toe hold side slide held for 2 secs, but 150 points if held for 1.5 to 1.9secs.

Jump - The original jump height was set at 5ft 10ins. A standard height of 6ft was adopted. In later years a 5ft 6in (1.65m) ramp height and 5ft (1.5m) were introduced. Originally to score a jump the skier had to ski over the jump and continue to ski to a 100m ride-out buoy without falling. In the early years up to 10% 'form' points were awarded.

The early days of jump measurement was by visually aligning the splash on landing against a floating plank with markers every foot. This was improved using trigonometry when jump stations (3) with large protractors and sighting arms, 2 to a table, one above the other, were introduced. The stations were located along a pre-measured baseline facing the area where the skier would land and the angle where the skier landed was taken from each station. These were then plotted on a master board. The point of landing was where the 3 angles intersected allowing a jump distance to be worked out. This has been greatly advanced by 'SplashEye', using cameras linked to a computer program. 'SplashEye', was developed by Donal Connolly (Golden Falls WSC) and is used and accepted worldwide.

'Native' records, as set by Irish qualified skiers at homologated competitions held in Ireland are recorded in black.

'Overseas' records as set by IWWF skiers at homologated competitions outside of Ireland are recorded in blue.

All Current records (both Native and Overseas) are recorded in RED.
